## FORCED CONVECTION

## OPERATING PRINCIPLE OF FAN ASSISTED TRENCH HEATERS

Convection heating systems utilize the phenomenon of heat absorption by air particles flowing through heat exchanger. The difference in densities of cold and heated air causes a delicate draft that initiates the airflow in the exchanger.

This principle is used in trench heaters, that is low mass, low water capacity and low heat inertia convection heaters.

These heaters are considered simplest in setting and allow for shortest reaction times for changes in room heat demand.

Use of fan allows to increase the airstream flowing through the trench heater exchanger, which in turn results in higher dynamics of heat transfer process and substantial increase of heating power of the trench heater.

The adjustment of fan heater is achieved by simultaneous change of fan speed and the light of the thermostatic valve with use of actuator fitted on that valve. The fan and the actuator are controlled by room controller that can be programmed according to user preferences.

The automatic adjustment of heater operation that initiates the heating mode only if it is required, allows for significant energy savings and thus lowering of operating cost of the whole building.

The fans used in VERANO products are equipped with low-voltage EC motors that allow for silent, safe and easy adjustment of heater.

You will find details pertaining to the construction of installation in the „Installation and maintenance manual for VKN fan assisted heaters“ section.

## OUR ADVANTAGES

### HIGHLY EFFICIENT HEAT EXCHANGER

Based on the research and development works, the optimal dimensions of the heat exchanger were used. As a result of that, an increase product heating output was obtained by 10 to 20%, depending of the unit length and height.

### ADJUSTMENT OF THE TRENCH

Adjustment legs allow for easy, one-step adjustment of the height of the trench in the mounting hole, as well as its trouble-free levelling.

### DEDICATED CONTROL SYSTEM

Modern room controllers allow for full control of heater operations.

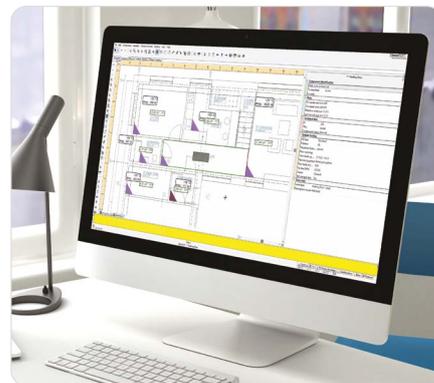

### MODERN EC FANS

Using 24V DC fan motors will provide much quicker and quiet air distribution, yet the entire product is safe and hassle free for install and maintenance.

### WIRELESS CONTROL

It is extremely easy to precisely control the heaters using a phone or tablet with the free application installed.

### TOOLS FOR DESIGNERS

Our products are available in the renowned INSTALSOFT, SANKOM and AUTODESK REVIT design programs.

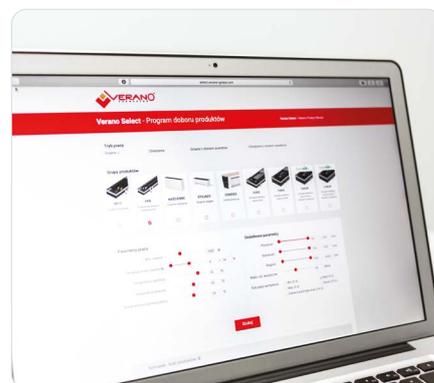

### COMPLIANCE WITH EN 16430 STANDARD

VKN5 Verano trench heaters have been tested in accordance with the applicable EN 16430 standard, which confirms their high quality.

### CAD AND BIM LIBRARIES

The VERANO product families used in BIM allow modification of the heater DIMENSIONS and the selection of the type of grille and frame. They also provide all information about the parameters of the products, and allow the heat output of the device to be measured depending on the operating parameters of the installation.

### VERANO SELECT

The selection program enables the selection of an appropriate type of device for any operating parameters, depending on the required heat output.

## CONFIRMED QUALITY

Years of thorough research, analyses and measurements, including those in the Warsaw, Cracow and Orlin Universities of Technology, Polish Academy of Sciences and own research we developed high class heating and heating-cooling devices.

They increase the energy efficiency of hot / cold air supply and significantly increase the efficiency of low-temperature systems that they work with.

The perfect technical parameters of VERANO products were also confirmed in the tests conducted in the HEATEST s.r.o. notified body and the Heizung – Lüftung – Klimatechnik Stuttgart at the Institut für Gebäude Energetik Universität Stuttgart.

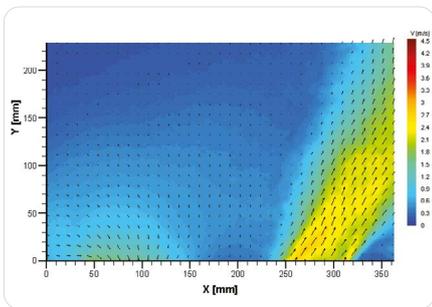

VERANO heaters are designed for heating both residential (detached homes and apartment buildings), office, service, retail, hotel, sacral spaces; sports objects, swimming pools and many others.

The choice of convector heaters is recommended to designers utilizing computer software for designing C.H. installation.

A correct technical design secures optimal choice of heater sizes and other devices, correct construction and hydraulic adjustment of heating installation, which influences future faultless and energy-saving use. VERANO heaters hold all the required EU documents:

- Technical approval and declaration of operating characteristics pursuant to the EN 16430 Standard,
- EU Declaration,
- PZH hygienic certificate.

## RESEARCH AND DEVELOPMENT

The VKN series trench heaters are characterized by an air flow formed by specially designed airflow baffles. Thanks to the use of modern measurement methods (PIV - particle image velocimetry) as well as computer simulations (CFD - computational fluid dynamics), unfavourable phenomena occurring in operation of the trench heaters have been eliminated, e.g. the appearance of zones with very low airspeed and the return suction of already heated air.

This allows to reduce the airspeed in the zone where people are staying to generally acceptable levels. This in turn largely reduces the risk of discomfort connected with airflow, so called "draft". The heat output tests of VKN trench heaters are conducted in a climatic chamber located at the VERANO headquarters in accordance with the requirements of the European standard EN-16430.

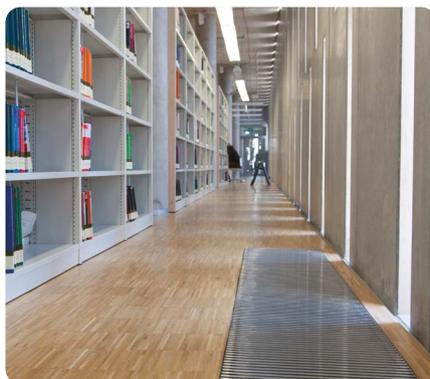

The acoustic power measurement of fan assisted VKN trench heaters is carried out in accordance with the European standard EN ISO 3744 at the VERANO headquarters. The measurement is made at points located on the measuring surface surrounding the tested heater above the sound reflecting plane. Thanks to the use of a digital sound analyzer, it is possible to measure broadband as well as in octave bands.

## VKN1 Height 65 mm and 90 mm

EXAMPLE OF PRODUCT VISUALIZATION

### EQUIPMENT

#### STANDARD EQUIPMENT:

- casing made of galvanized steel sheet in RAL 9005 black,
- highly efficient cooper-aluminium heat exchanger, powder coated in black with air vent,
- modern fan with silent and efficient 24V DC motor
- connection space cover,
- fan cover, so called grille, with airflow baffle,
- water connection: 1/2" female thread,
- assembly struts,
- fixing anchors,
- levelling legs.

#### ADDITIONAL EQUIPMENT:

- casing made of galvanized steel sheet in RAL colour,
- decorative frame (F or L type) made of natural or anodized aluminium or painted in RAL colour,
- 18 mm high decorative grille:
  - roll-up: made of natural or anodized aluminium,
  - linear: made of natural, anodized aluminium or stainless steel or painted in RAL colour,
  - modular: made of natural or anodized aluminium,
- assembly fibreboard protection for installing and transporting,
- raised floor kit,
- bimetal temperature sensor,
- foil sleeve for heat exchanger or fan,
- air filter (requires trench casing height extension by 10 mm),
- BMS controllers.

### DIMENSIONS

DIMENSIONS	[mm]
Trench height (H)	65, 90
Trench bottom width (B)	140, 170
Top width / Grille width (Bk)	164, 194
Trench length (L)	950÷2000

Non-standard (NS) heater lengths are available on request.

**ORDER CODE:**  
**VKN1-9/14/110 (L)**

## HEAT OUTPUT CORRECTIVE FACTORS FOR VKN HEATERS ACCORDING TO THE GRILLE TYPE

GRILLE TYPE	AIRFLOW	CORRECTIVE FACTOR
Roll-up double T-bar profile aluminium grille - 13 mm gap	67%	1,00
Roll-up double T-bar profile aluminium grille - 8 mm gap	63%	0,99
Roll-up closed profile aluminium grille	62%	1,00
Roll-up wooden grille	52%	0,98
Modular snap on profile aluminium grille	62%	0,97
Linear snap on profile aluminium grille	62%	1,08
Linear stainless steel grille	71%	1,09

## HEAT OUTPUT OF VKN1-9/14/L

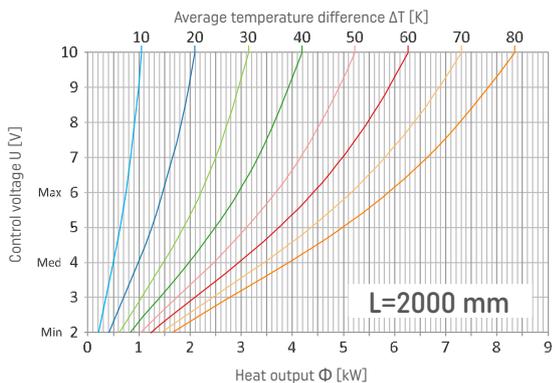

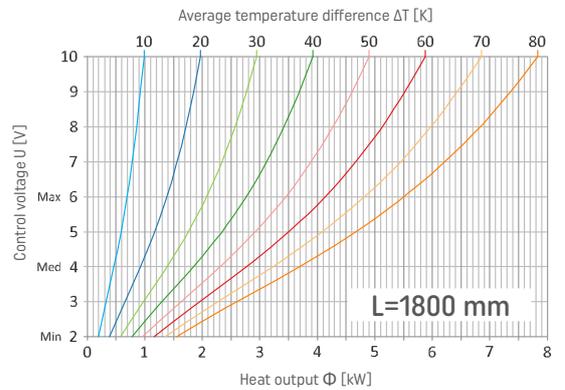

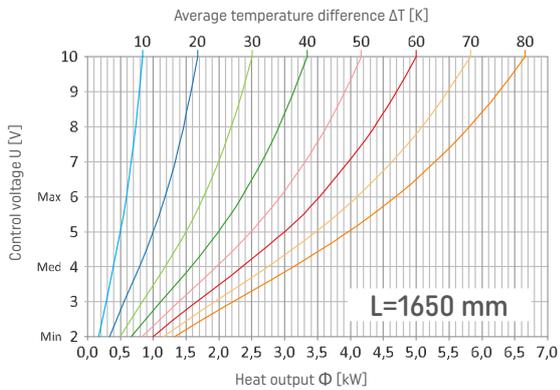

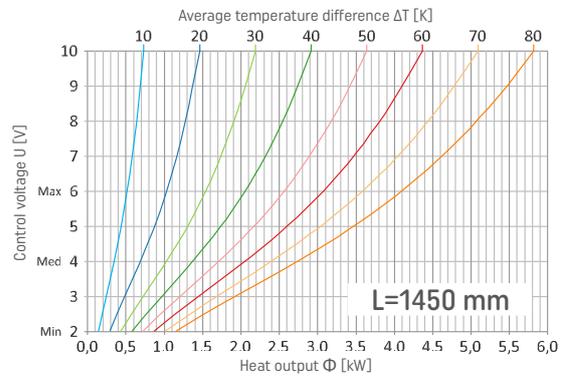

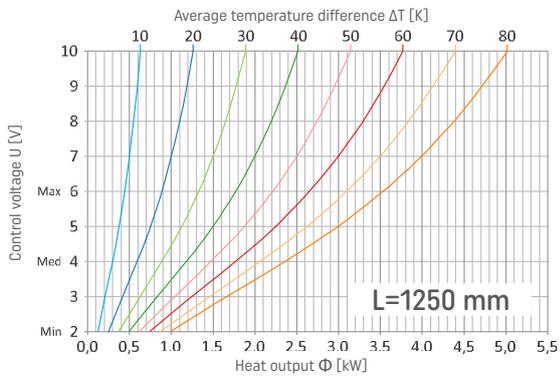

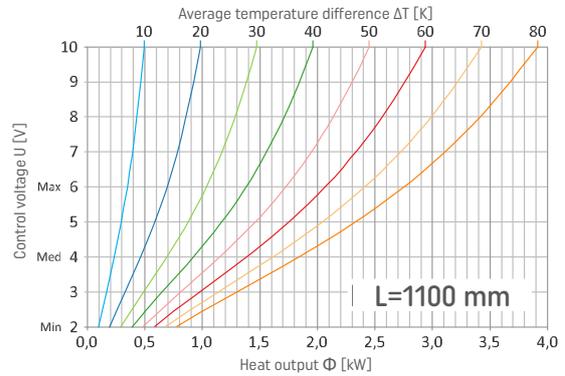

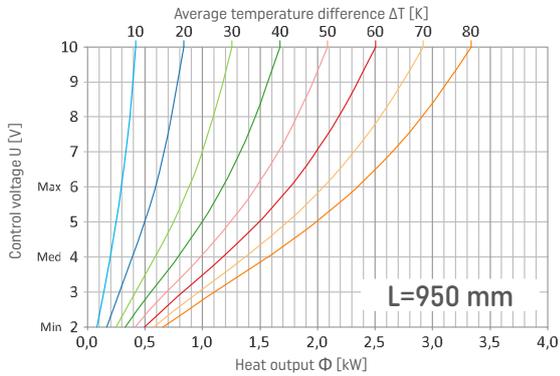

The graphs present how heat output  $\Phi$  [W] depends on the respective average temperature differences  $\Delta T$  [K] for control voltages  $U$  [V].

## HEAT OUTPUT OF VKN1-9/17/L

The graphs present how heat output  $\Phi$  [W] depends on the respective average temperature differences  $\Delta T$  [K] for control voltages  $U$  [V].

## VKN1 WATER CAPACITY

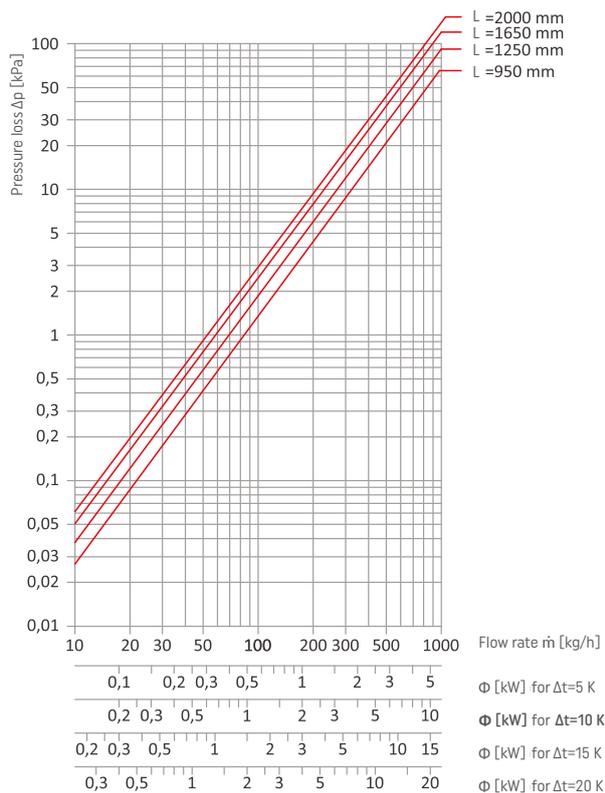

TRENCH LENGTH L [mm]	HEATER TYPE	
	VKN1-6,5/14/L VKN1-9/14/L	VKN1-6,5/17/L VKN1-9/17/L
	WATER CAPACITY [dm <sup>3</sup> ]	
950	0,20	0,29
1100	0,22	0,34
1250	0,28	0,42
1450	0,32	0,48
1650	0,38	0,57
1800	0,41	0,61
2000	0,46	0,69

## DECLARED PROPERTIES

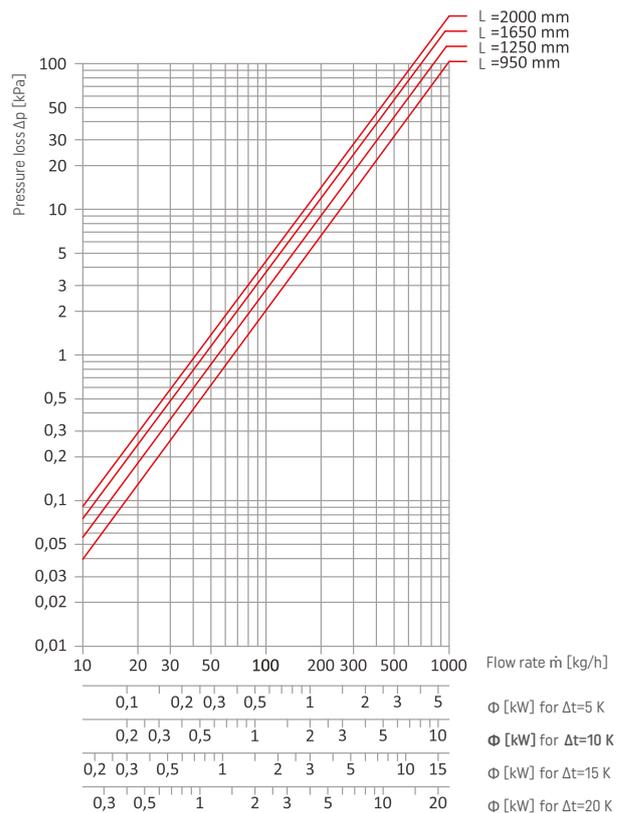

Maximum permissible operating pressure:	1,0 MPa.
Test pressure:	1,3 MPa.
Maximum hydraulic pressure:	1,69 MPa.
Maximum operating temperature:	110°C

## PRESSURE LOSS

| VKN1-6,5/14/L, VKN1-9/14/L

| VKN1-6,5/17/L, VKN1-9/17/L

## VKN5 HEIGHT 75 mm, 90 mm, 140 mm and 180 mm

EXAMPLE OF PRODUCT VISUALIZATION

### EQUIPMENT

#### STANDARD EQUIPMENT:

- casing made of galvanized steel sheet in RAL 9005 black,
- highly efficient cooper-aluminium heat exchanger, powder coated in black with air vent,
- modern fan with silent and efficient 24V DC motor
- connection space cover,
- fan cover, so called grille, with airflow baffle,
- water connection: 3/4" female thread,
- assembly struts,
- fixing anchors,
- levelling legs.

#### ADDITIONAL EQUIPMENT:

- casing made of galvanized steel sheet in RAL colour,
- decorative frame (F or L type) made of natural or anodized aluminium or painted in RAL colour,
- 18 mm high decorative grille:
  - roll-up: made of natural or anodized aluminium,
  - linear: made of natural, anodized aluminium or stainless steel or painted in RAL colour,
  - modular: made of natural or anodized aluminium,
- assembly fibreboard protection for installing and transporting,
- raised floor kit,
- bimetal temperature sensor,
- foil sleeve for heat exchanger or fan,
- air filter (requires trench casing height extension by 10 mm),
- BMS controllers.

### DIMENSIONS

DIMENSIONS	[mm]	
Trench height (H)	75, 90	140, 180
Trench bottom width (B)	250, 350	300
Top width / Grille width (Bk)	274, 374	324
Trench length (L)	950÷2750	800÷2700

Non-standard (NS) heater lengths are available on request.

#### ORDER CODE:

# HOW TO SELECT THE CORRECT HEATER

## Exemplary calculations:

The calculated heat demand of a room is 680 W.

The design parameters for water supply and return and room temperature are (respectively):

$t_s/t_r/\theta_a = 55/45/20^\circ\text{C}$  (water parameters typical for low-temperature heat sources such as condensing gas boiler or heat pump).

### METHOD 1

Read out the right conversion factor for project installation temperatures. In this case conversion factor is 0,600 (according to the table on page 9).

Next divide the calculated heat demand (680 W) by the read corrective factor (0,600). The result is the heat output (1135 W) for which we select the heater for the 75/65/20°C parameters.

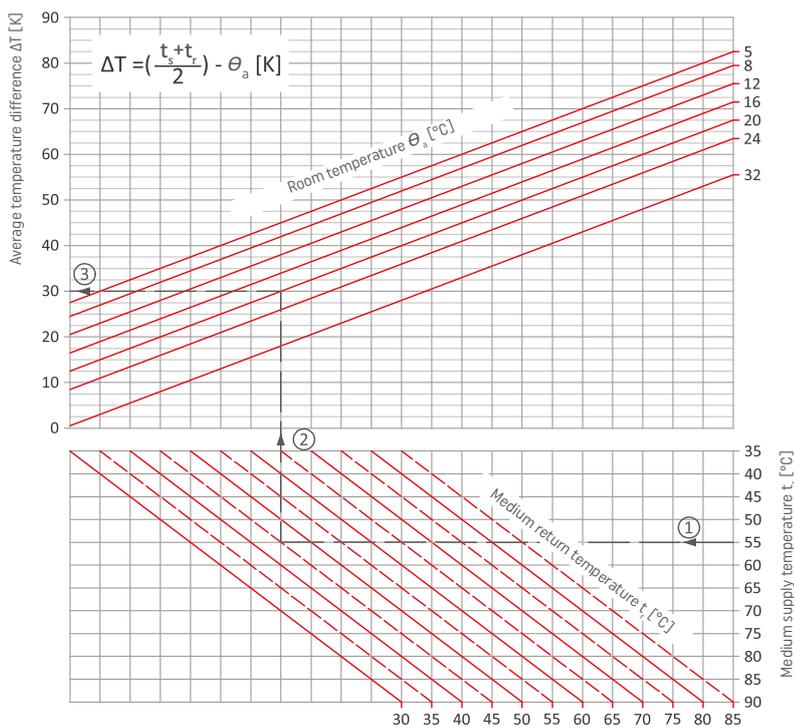

The last step is to select a heater with room-appropriate size, e.g. the **VKN1-6,5/17/110** model, which in the Med mode for 75/65/20°C parameters will reach the heat output of 1135 W, and 680 W for 55/45/20°C parameters.

### METHOD 2

Using the graph below read/calculate the average temperature difference for selected temperatures.

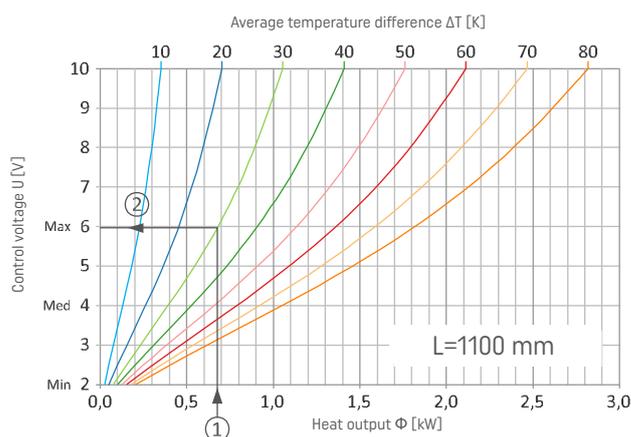

The graph allows for easy readout of average temperature difference  $\Delta T$  for selected heating media parameters  $t_s$  and  $t_r$

depending on room temperature  $\theta_a$ .

1. Draw a horizontal line from the supply temperature of  $t_s=55^\circ\text{C}$  to the crossing point with the transverse line of returning water temperature  $t_r=45^\circ\text{C}$
2. Draw a vertical line to the crossing point with the transverse room temperature line  $\theta_a=20^\circ\text{C}$
3. Draw a horizontal line and read the average temperature difference  $\Delta T=30$  K

Next, using the graphs from page no. 10 select a heater with appropriate parameters for that room. Always take the mode of fan operations into account.

1. Draw a vertical line from the calculated heating power demand (680 W) to the crossing point with the 30 K temperature difference curve.
2. Read the control voltage.

The selected **VKN1-6,5/17/110** heater reaches the assumed design parameters with a control voltage of  $U=6$  V (Max mode).

## HOW TO SELECT THE CORRECT HEATER

### METHOD 3

Based on **VERANO SELECT** selection programme: [www.select.verano-global.com](http://www.select.verano-global.com) or scan the QR code:

## RAIL POWER SUPPLY SELECTION

- Using the table included in the catalogue read the maximum power of electric fan of selected heater. Selection of power lower than the maximal will result in switching off fans in higher fan speed and may result in damage to power supply unit or fan motor. Maximum energy demand and current are to be read from the table for the Boost mode.
- Using the technical sheet of the selected actuator read its maximum electric power – e.g. 4,8 W / 0,2 A for the VERSST24 actuator.
- Using the technical sheet of the selected controller read its maximum electric power – e.g. 1,3 W / 0,06 A for VER-24 Wi-Fi and VER-24S controllers.
- Sum up all maximum powers and loads for all devices used (including multiple use of devices).
- After calculations select the smallest power supply unit that provides the required electric power.

### EXAMPLE:

3 heaters were selected for a room according to its heat demand:

- 1 x VKN1-6,5/17/125,
- 2 x VKN1-6,5/17/165.

Additionally there are 3 VERSST24 thermal actuators and 1 VER-24 WI-Fi controller in the system.

Using the electric data for VKN1 heaters included on page no. 8 and the technical sheets of control devices we read:

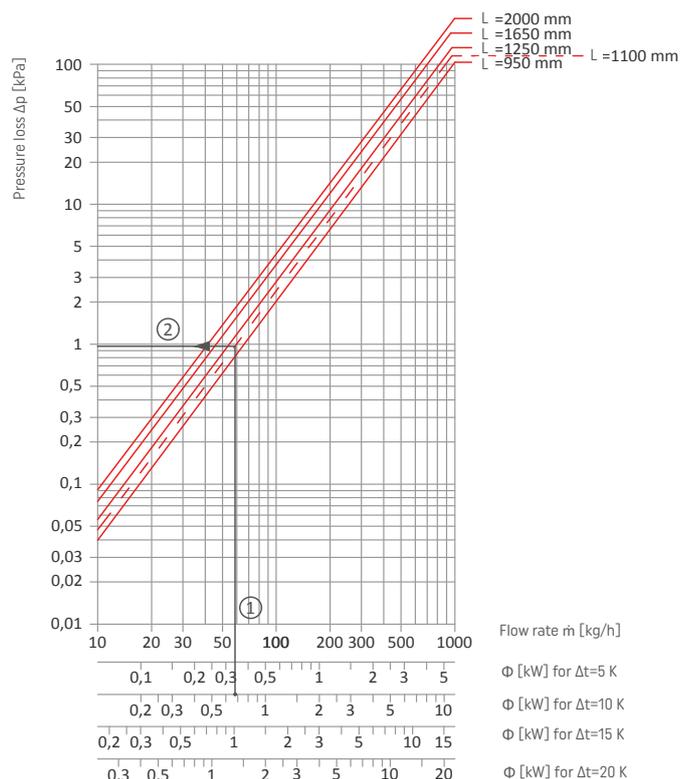

DEVICE TYPE	MAXIMUM ELECTRIC POWER DEMAND	MAXIMUM CURRENT
1 x VKN1-6,5/17/125 fan assisted trench heater	1 x 9,2 W	1 x 0,38 A
2 x VKN1-6,5/17/165 fan assisted trench heater	2 x 12 W	2 x 0,5 A
3 x VERSST24 thermal actuator	3 x 4,8 W	3 x 0,2 A
1 x VER-24 Wi-Fi room controller	1 x 1,3 W	1 x 0,06 A
<b>TOTAL:</b>	<b>48,9 W</b>	<b>2,04 A</b>

**POWER SUPPLY UNIT SELECTED: Z060 24VDC (60 W / 2,5 A)**

## PRESSURE LOSS

Based on heater selection mode, as presented on page 43 we selected the VKN1-6,5/17/110 heater with a power of 680 W at fan voltage of 6V. Cooling down temperature of the heating medium is  $\Delta t=10^{\circ}\text{C}$

- Using the axis for  $10^{\circ}\text{C}$  cooled medium we draw a vertical line to the heating power of 0.68 kW till it crosses the transverse line representing heater length of  $L=1100$  mm.
- Draw a horizontal line and read the pressure loss value of  **$\Delta p=0,98$  kPa**.

## ELECTRIC CONNECTION (WIRING) DIAGRAM

Fan assisted trench heaters are regulated automatically by using a room controller and a thermal actuator. The controller, using the built-in sensor, measures the temperature in the room and maintains its value at the set value. High regulation precision is possible thanks to the simultaneous, fully automatic control of both the 2-position valve actuator and the fan motor.

### VER-24S

- Room air temperature control
- Front panel made of glass
- Physical buttons
- Available in white colour
- Surface mounting

### VER-24

- Room air temperature control
- Front panel made of glass
- Colourful, touch display
- Available on white or black colour
- Surface mounting

### VER-24 WIFI

- Features the same as VER-24
- The built-in Wi-Fi module allows to control using a mobile device
- The ability to control from anywhere on Earth, thanks to the online application

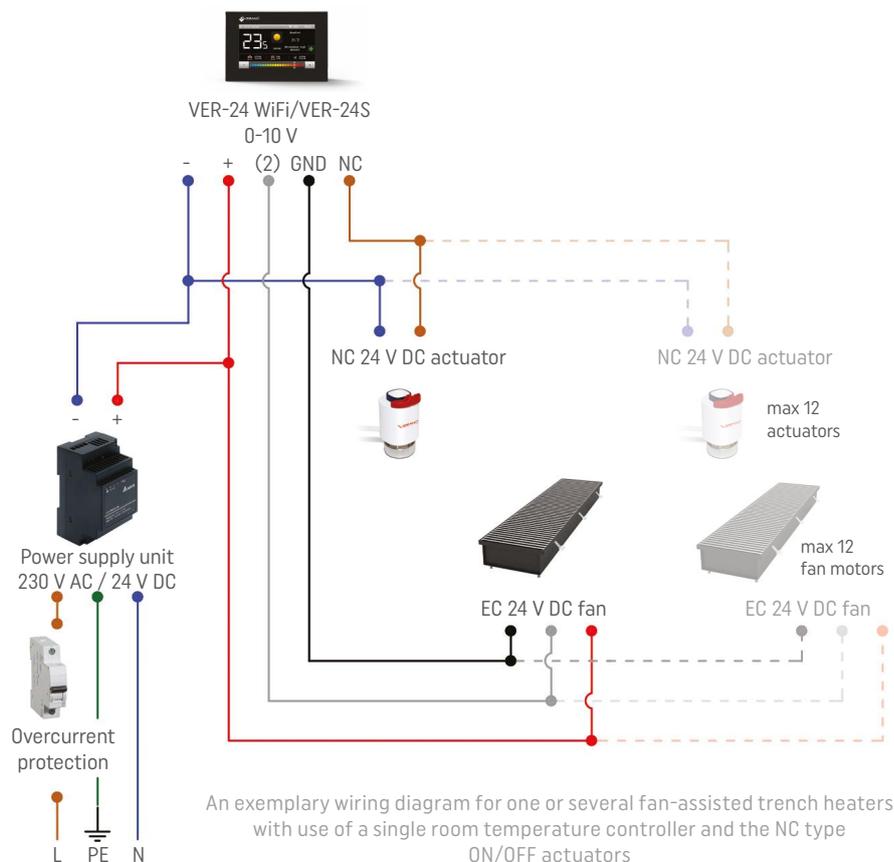

Common features of the regulators: built-in temperature sensor, control output of the 0-10 V DC actuator and ON / OFF actuator of the NC and NO type, the control output of the 0-10V DC EC fan. All regulators are supplied by 24 V DC.

The following are required for correct operation of trench heater with fan: room controller, thermal actuator installed on thermostatic valve and 24V DC power supply unit selected according to the electrical characteristics of installed heaters.

The room regulator, according to diagram below, is connected with heater fan and the actuator installed on thermostatic valve. The recommended wires type for control system is LIY or LIYCY. Due to the built-in temperature sensor the room controller should not be built over or covered with furniture or other interior design elements.

It is also possible to connect several fan-assisted heaters to a single regulator. In order to do that the heating zones should be correctly designated, so that the number of fan motors does not exceed 12 pieces, that is the upper limit for VER-24 WiFi and VER-24S controllers. The detailed electric data are presented in the respective sections of the product catalogue.

VERANO also offers 230 V AC/ 24 V DC DIN-rail or switchboard mounted power supply units. The example procedure for selection of power supply unit is presented on page 45. The power supply unit should be protected with appropriate overcurrent protection that will also allow to switch the power off during service and maintenance.

Only properly skilled and trained personnel, holding licenses and observing applicable standards can install electric connections. Power can only be switched back on when the correctness of the whole wiring was checked and approved.

Due to use of safe low-voltage fans the heaters can only be powered by 24 V DC voltage. It is prohibited to connect the heaters directly to 230 V AC power grid.

## INSTALLATION AND MAINTENANCE MANUAL FOR VKN FAN ASSISTED HEATERS

Prior to start of assembly always make sure to prepare a trench in the floor with dimensions exceeding the dimensions of the heater by some 40-50mm in every direction. Plan the depth of the trench in such a way, that the surface of grille matches the expected floor finish level.

Levelling the trench casing of fan assisted trench heaters is achieved with use of levelling legs. The legs shall rest on the construction layer of the floor. The next step is to assemble the anchoring screws and anchors that fix the heater to the concrete.

Due to the strength requirements we recommend insulation materials with compression strength of no less than 70 kPa, e.g. the EPS70, for insulation of heater trench casing. Free spaces between insulation and trench casing should be filled with low compression foam. The casing of trench heater should only be installed after the heating set was first removed from it.

**Fan assisted trench heater is installed in such a way that the heat exchanger faces the division and the fan faces the heated room. The fan assisted heaters are not universal – always remember to quote the correct connection side when ordering.**

For the duration of finishing works it is recommended to cover the trench casing with assembly cover that protects the elements of the heater from mechanical damage and dust.

Prior to pouring concrete that the edge of the trench casing will rest on make sure that all water and control connections were installed.

Electric wires and installation pipes may be connected to the trench casing from its longer or shorter side. After hydraulic and electric connection of the heater, test the correctness of control system and remove all dirt from trench casing. The poured concrete that the edge of the trench casing will rest on should be at least 50 mm thick.

During assembly of trench heater always remember about the assembly spreaders that are included with the heater and prevent the trench casing and heater edge from deformation. Addition of dilatation mat on the side of heater trench casing allows to lower the contact surface of concrete and heater casing, which provides additional acoustic insulation of the heater.

The L and F type frames are additional accessories that allow the finishing of the trench casing edges during finishing works.

All assembly operations should be performed by properly skilled and trained construction industry, electrical and installation workers.

The trench heaters used in heating season should not be covered by carpets, furniture or curtains. The grilles can resist pressure and abrasion connected with low intensity pedestrian traffic. Avoid exercising excessive pressure on the grille bars, e.g. by placing room furnishings on them.

Due to the possible influence of dirt on the efficiency of heater we recommend the periodic cleaning of heater trench casing.

## EXAMPLE OF CONNECTION VKN TRENCH HEATERS TO THE CENTRAL HEATING INSTALLATION

| Connection of the VKN trench heater

| Example: Straight connection

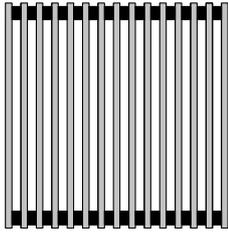

| Example: Angle connection

## GRILLES FOR TRENCH HEATERS

### Roll-up grille double T-bar profile

TOP VIEW

SINGLE BAR CROSS SECTION

#### STANDARD:

- Spacers 17 mm.
- Distance between the bars - 13 mm.
- Spacers made of black PVC.

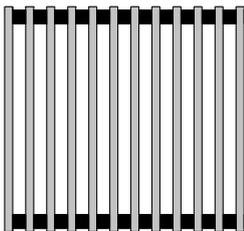

#### OPTION:

- Spacers are available in other colours and size:
- grey 13 mm, 8 mm.

Maximum length of one grille section is 6 m.

GRILLE TYPE	COLOUR	ORDER CODE
Roll-up grille, double T-bar profile - natural aluminium	Natural aluminium	ZDW-1,8/B/L
	Satin	ZADWS-1,8/B/L
Roll-up grille, double T-bar profile - anodized aluminium	Stainless steel	ZADWST-1,8/B/L
	Gold	ZADWZ-1,8/B/L
	Black	ZADWC-1,8/B/L

### Roll-up grille closed profile

TOP VIEW

SINGLE BAR CROSS SECTION

#### STANDARD:

- Spacers 13 mm.
- Distance between the bars - 13 mm.
- Spacers made of black PVC.

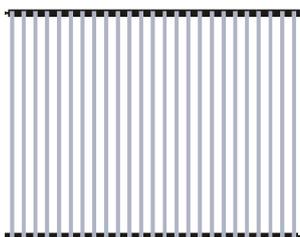

#### OPTION:

- Spacers are available in other colours and size:
- grey 17 mm, 8 mm.

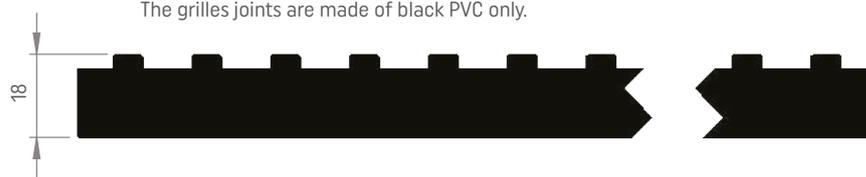

Maximum length of one grille section is 6 m.

GRILLE TYPE	COLOUR	ORDER CODE
Roll-up grille, closed profile - natural aluminium	Natural aluminium	ZAL-1,8/B/L
Roll-up grille, closed profile - anodized aluminium	Satin	ZAALS-1,8/B/L
	Stainless steel	ZAALST-1,8/B/L

### Modular grille (made of aluminium)

TOP VIEW

CROSS SECTION

#### THE GRILLE IS AVAILABLE IN TWO VERSIONS:

- natural aluminium,
- anodized aluminium.

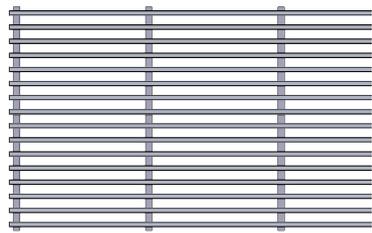

The grilles joints are made of black PVC only.

GRILLE TYPE	COLOUR	ORDER CODE
Modular grille - natural aluminium	Natural aluminium	MPZ-1,8/B/L
Modular grille - anodized aluminium	Satin	MPZAS-1,8/B/L
	Stainless steel	MPZAST-1,8/B/L

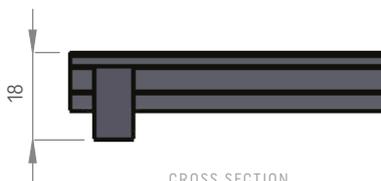

## GRILLES FOR TRENCH HEATERS

### Linear grille (made of aluminium)

TOP VIEW

GRILLE ENTIRELY MADE OF ALUMINIUM.

CROSS SECTION

The grille is available in the following variants:

- natural aluminium (cross – bar joiners are coated in black RAL 9005),
- aluminium coated in RAL colour (grille entirely coated in RAL),
- anodized aluminium (cross – bar joiners are coated in black RAL 9005).

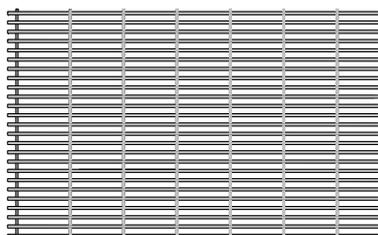

It is possible to make a corner grille for corner section of the heaters at an angle of 90° and others.

The corner grille can be made only if it is ordered with a heater at the same time.

Maximum length of one grille is 3 m.

GRILLE TYPE	COLOUR	ORDER CODE
Linear grille, snap profile - natural aluminium	Natural aluminium	PZW-1,8/B/L
Linear grille, snap profile - anodized aluminium	Satin	PZWAS-1,8/B/L
	Stainless steel	PZWAST-1,8/B/L
Linear grille, snap profile - RAL colour	RAL colour	PZWR-1,8/B/L

### Stainless steel linear grille

TOP VIEW

CROSS SECTION

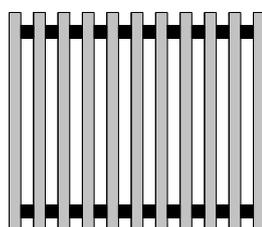

THE GRILLE IS AVAILABLE ONLY AS A RIGID VERSION.

Maximum length of one section of the grille is 2 m.

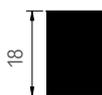

Grille length longer than 2 m are made of several elements of equal lengths.

GRILLE TYPE	COLOUR	ORDER CODE
Stainless steel linear grille	Stainless steel	SN-1,8/B/L
	Stainless steel brushed	SNS-1,8/B/L

### Roll-up wooden grille (made of natural wood)

TOP VIEW

SINGLE BAR CROSS SECTION

**STANDARD:**

- Spacers 13 mm.
- Distance between the bars - 13 mm.
- Spacers made of black PVC.

**OPTION:**

Spacers are available in other colours and size:

- wooden spacers (beech) 17 mm,
- grey 17 mm, 8 mm.

Maximum length of one grille section is 6 m.

It is possible to make a corner grille for corner section of the heaters at an angle of 90° (heringbone grille). The corner grille can be made only if it is ordered with a heater at the same time.

## ADDITIONAL EQUIPMENT FOR TRENCH HEATERS

### ZPP Raised floor kit

Kit contains:

- 1 x support,
- 2 x expansion bolt with a screw,
- 4 x nut and washer.

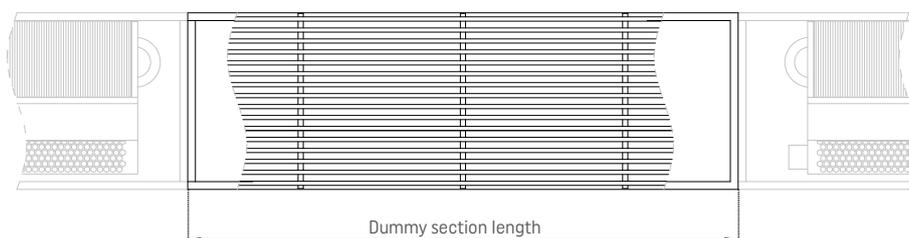

ZPP kit allow to level the unit up by 50 mm.  
Other heights on request.

## EXTENSION OR ADDITIONAL DUMMY SECTION OF THE TRENCH CASING

First step of heating units selection is choosing the standard unit with required heat output. Sometimes, standard lengths of units does not come together with architectural vision of the room. For this kind of situation we can offer customized solutions, such as:

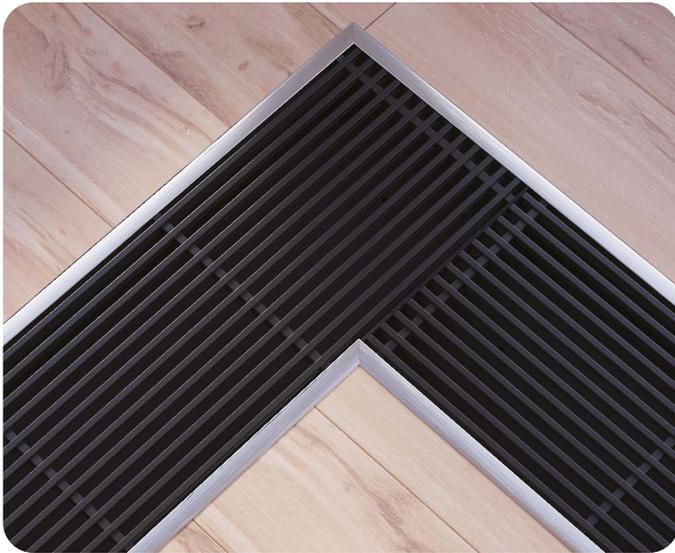

- extension of the heater trench casing to the required length,
- making a separate dummy section of the trench casing equipped with all necessary assembly elements.

Separate dummy section is not compatible for heat exchanger or fan installation.  
Maximum dummy section length is 4 m. Grilles and frames can be also customized.

## CORNER TRENCH AND GRILLE OPTIONS

**CORNER TRENCH**  
• with linear grille.

FRAMES:  
F-type

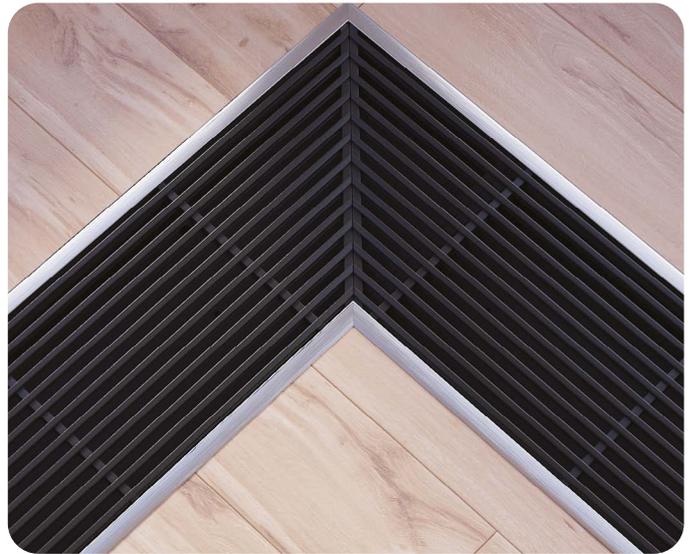

**CORNER TRENCH**  
• with cross-bar grille.

FRAMES:  
F-type

**CORNER TRENCH**  
• with cross-bar grille  
• herringbone grille shape.

FRAMES:

## ANODIZED ALUMINIUM COLOURS

SATIN

BLACK

STAINLESS STEEL

GOLD

F- and L-type frames are available in exact the same anodizing colours.

## RAL PALETTE

Frame and linear aluminium grilles are available in RAL colour at additional surcharge.

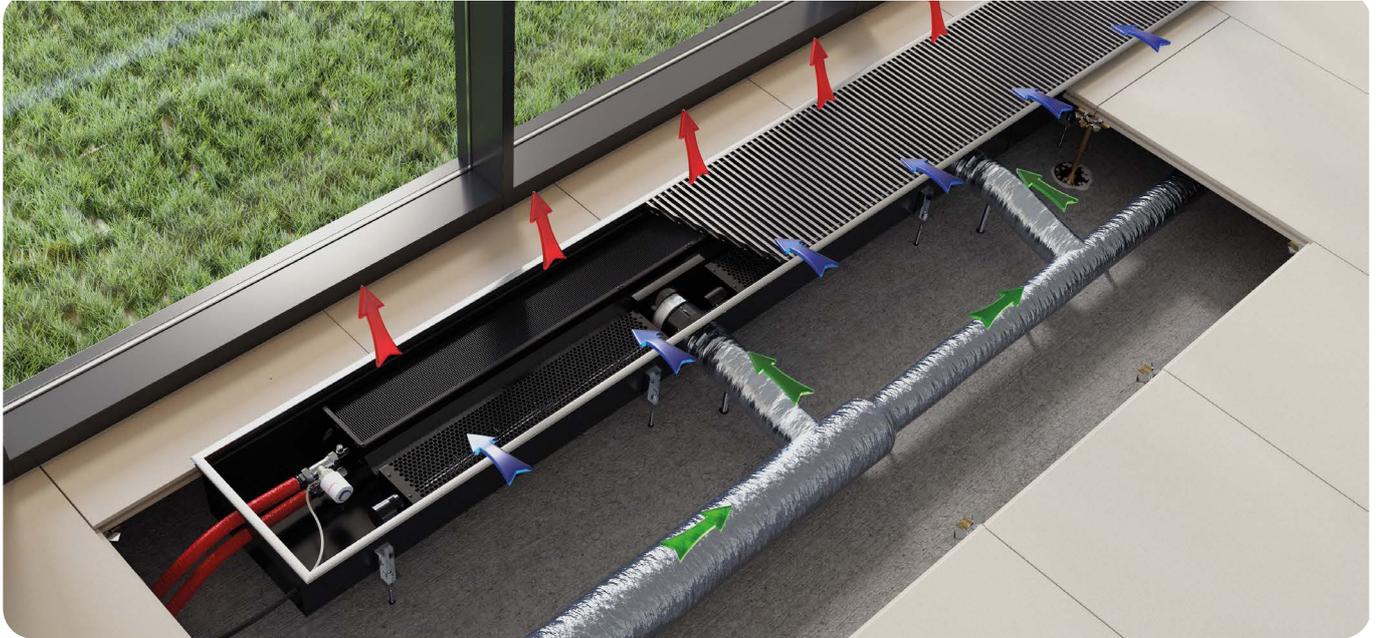

## FAN ASSISTED TRENCH HEATERS WITH FRESH AIR SUPPLY

# freshAIR+

The freshAIR+ VKN5P family of products are completely new trench heaters with the function of supplying conditioned air from the air handling unit.

More details in the freshAIR+ catalogue

The traditional heating system is based on recirculation air. In the construction of VKN5P trench heaters, which are part of the freshAIR+ system, it is possible to supply conditioned air from an AHU in which it undergoes initial filtration.

To optimize air flow regulation, VKN5P heaters have a factory-fitted constant air volume regulator (CAV), which allows quick and easy set-up of the designed air stream.

When designing a Demand Controlled Ventilation (DCV), it is possible to install an additional module with a variable air volume controller (VAV). Available BMS modules allow the use of a panel with an air quality meter (CO<sub>2</sub> measurement).

The airflow of conditioned air is supplied directly to the heat exchanger, thanks to which the supply air temperature can be locally adapted to the needs of users. The supply air temperature is regulated by an additional temperature sensor connected to the VER-44 WiFi controller or the BMS system.

### ADVANTAGES OF VKN5P HEATERS USAGE:

- additional heating of air supplied from the air handling unit,
- quick setting of the projected air stream thanks built-in CAV regulator,
- the possibility of using one or two ventilation slots,
- a choice of three heights of the trench heaters: 120, 140 or 180 mm,
- the length of the heater is adjusted for the needs of interior design: from 1000 to 2550 mm,
- depending on the height of the trench heater there are three ventilation slots diameters available: 80, 100 and 125 mm.

VER-44 WiFi

## AHUs, HEATERS, COOLERS, FAN ASSISTED TRENCH HEATERS AND CLIMACONVECTORS

# freshAIR+

The family of freshAIR+ products also includes air handling units, air heaters and coolers, as well as trench heaters and climaconvectors, which will ensure comfort and clean air in your home.

### freshAIR+ AIR HANDLING UNITS

Compact freshAIR+ air handling units are equipped with a two-stage filtration system, a heater or cooler and an enthalpy heat exchanger. The used Constant Flow system makes it easy to adjust installation and guarantees a constant air flow, regardless of weather conditions or the degree of contamination of the filters.

### freshAIR+ DUCT HEATERS AND COOLERS

freshAIR+ heaters and coolers have a built-in control valve and actuator. The used screw connections allow for the separable connections, e.g. using a PEX connector. Coolers are also available with a built-in condensate pump.

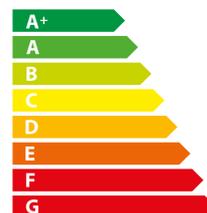

### freshAIR+ TRENCH HEATERS AND CLIMACONVECTORS

freshAIR+ trench heaters and climaconvectors are equipped with modern heat exchangers to ensure thermal comfort in the room thanks to the possibility of local and central regulation. Built-in constant flow regulator and PICV valves allow you to simplify installation work. They are perfect especially in office spaces.

### freshAIR+ AIR HANDLING UNITS ADVANTAGES:

- Modern casing made of EPP,
- Recovery of temperature and moisture from the removed air,
- Automatic bypass,
- The ePM10 and ePM1.0 anti-smog filters compliant with the new standard,
- Control with PM2.5 and CO2 sensors,
- A constant stream of air regardless of weather conditions and the degree of filter contamination,
- Built-in PTC pre-heater,
- Built-in reheater or water cooler,
- Energy-saving EC fans,
- Aesthetic frame masking the condensate drain,
- Wireless control via a mobile application (Android and iOS) and a website,
- High thermal and acoustic insulation,
- Light construction,
- High energy efficiency.
